

Charles Noyes Kinney
Professor of Chemistry Drake University
State Chemist of Iowa
Des Moines, Iowa

June - 14 - 1911

3¹⁵ P.M.

And I have to roll out at 6 o'clock

Many things were predicted in the letters read tonight which were placed in the files four years ago that at that time seemed rather visionary. The University has made a world of growth - I believe a more wonderful growth will be witnessed within the next four years. Drake is surely destined to become one of the great schools of the middle west. We are proud of our relationship now - we will be more proud five years hence. The problem of raising \$400,000 is great but will probably be ordinary compared to problems of today.

We as a class have received a great deal
of praise and many words of praise for
maintaining such a well organized class -
in as much as we have our responsibility
to the University as a class is increased
in proportion. We have made a
great record, and we can maintain our
work and keep on setting precedents
for all classes ^{before us} and all classes
coming after us, to follow.

Here is to our truest & most loyal
friends who so hospitably were
enjoying tonight, Professor & Mrs. Quincy.

Eugene Poston
